Healthy Homes Section**

Approved Encapsulants

Encapsulants are coatings that are usually sprayed or rolled onto surfaces, and are formulated to bond with the underlying paint coatings. This makes a long-lasting barrier between the lead and human contact. **Conventional paints are not encapsulants!**

Application of an encapsulant to address lead paint or lead hazards is abatement. It must be performed by a certified lead abatement professional. Individuals not certified to perform lead abatement, and therefore may not apply lead encapsulants include, but are not limited to: EPA Certified Renovators, painters, carpenters, plumbers, floor covering installers, landlords (unless working in the unit they themselves occupy), window installers, electricians, and HVAC installers. Homeowners may apply encapsulants to their own homes during remodeling, renovating and painting projects. Manufacturers' instructions must be read carefully to determine if an encapsulant is an appropriate option, and proper surface preparation and application procedures must be followed.

The State of Michigan does not conduct testing on encapsulant products, but approves materials based on compliance with ASTM standards and testing by competent national and regional laboratories. The following is a **partial** list of encapsulant products that have been approved for use in Michigan for lead abatement projects and to make painted surfaces safer for young children. This is not intended to be an exhaustive list and is provided solely as an information service. The State of Michigan does not endorse or recommend any encapsulant. If you would like to add a product to this list, please contact the Healthy Homes Section at 517-335-9390.

Other encapsulants may be used if they meet the correct ASTM International Standard. The label should say that it meets either **ASTM E 1796-03** for liquid encapsulant products or **ASTM E 1797-04** for reinforced liquid encapsulant products. If the product does not have one of these ASTM standard numbers, it is not approved for use in the State of Michigan.

L-B-C Lead Barrier Compound
Type III
Child Guard
LeadMaster
Fiberlock Technologies, Inc.
150 Dascomb Road
Andover, MA 01810
